Ride, don't walk

The road to technological knowledge and experience is challenging, and the paths today are littered with signs advising educators about the most advantageous routes to success. From superintendents to teachers to students, the highways paved following the acquisition of TETRIX[®] MAX or TETRIX PRIME Building Systems offer smooth and eventful trips through robotics. The variety of possible creations through student experimentation and the affordable cost of the robotics building systems lead to rides that have a variety of possible conclusions. Success in the end will be measured by the creative obstacles overcome through the vision of leadership, the direction of instructors, and the creative nature of students. Pitsco's TETRIX Building Systems feature parts of the highest quality, as well as sturdy and durable gears and drive motors that are fast and have high torque abilities. This original metal building system is already the kit of choice for many classrooms, enabling students to create functional, mechanical, hands-on innovations. Should your roadways be economically challenged, the following grants might be within walking distance.

Caterpillar Foundation

The Caterpillar Foundation champions programs that support education, the environment, and basic human needs.

More: <http://www.caterpillar.com/en/company/caterpillar-foundation.html>

Weingart Foundation

The Weingart Foundation is designed to improve the capacity and sustainability of nonprofit organizations to achieve their missions in the areas of health, human services, and education.

More: <http://www.weingartfnd.org/>
