Homeschoolers can 'draft' their futures

Hearlihy's drafting, architecture materials available in special packs

Parents who homeschool their children could be daunted at the prospect of teaching mechanical drafting or architecture. But with guidance and the right materials, they can achieve success.

Putting together guidance and material is exactly what Hearlihy has done with its five new packages designed just for homeschools. Combining the needed tools and materials with easy-to-follow texts, these collections help parents lead drafting and architecture lessons with confidence. Plus, the first four packages follow a natural progression. The packages include:

- **Introduction to Drafting** – All the drafting tools and materials to get started are included, as well as plans and introductory workbooks for drafting, architecture, and construction graphics.

- **Intermediate Drafting Workbook** – Using materials from the previous package with new texts, students delve into advanced dimensioning, print reading, and more.
- **Architectural Design & Graphics** – Students continue to use the introductory package materials with additional texts to explore architecture, green building, and more drawing.
- **Green Building Kits** – The text provides details about building green, and the Straw Bale and Earth Sheltered House Kits enable students to apply and see the concepts.
- **Engineering with Paper & Cardboard** – Using everyday items, these texts offer dozens of activities to develop engineering skills and critical thinking.

Mechanical drafting provides fundamental skills for any student interested in moving on to computer-aided drafting and architecture – and it makes a great tool for cementing various math concepts and for turning ideas into two-dimensional designs.

The packages are priced starting at \$30. To learn more about the Hearlihy homeschool materials, visit www.hearlihy.com/homeschool.
